

ISO 50001 - ENERGY POLICY

As QNB A.S., we aim to contribute to sustainable development of our country with Energy Management System that we created in line with our vision, mission, principles and values.

In parallel with this purpose, we undertake to

1. ensure that current energy sources are used in the most efficient way by getting full participation and support from the employees without sacrificing comfort and service quality and develop our energy performance continuously,
2. to get information and sources required for realizing our aims and targets for efficient energy use and put the aims and targets into action,
3. to always comply with compliance obligations for which we are responsible and needs and expectations of our stakeholders and be in cooperation with institutions to this end,
4. to carry out works to conserve energy within the scope of the services we provide, prioritize the supply of energy efficient products, appliances and services, prioritize to make energy efficient choices in the design and revision of our business processes and develop projects for use of renewable energy sources,
5. to ensure that all our stakeholders that we can influence to ensure the continuity of energy efficiency take part in this system with the responsibility and awareness of using the energy sources “when needed” and “as needed” by reducing their consumption of natural resources, increase their awareness with information flow and learning programs to this end and provide efficient communication to create shared value and beneficial results,
6. to boost long-term environmental and economic sustainability of our efforts by reducing energy consumption and related costs and reducing our carbon footprint to integrate it into our strategy to fight climate crisis.
